

Caretinum™

Point of Care Solution

Caretinum™ provides a total solution – whatever your lines of business, level of technology, capital budget and even your vision for growth. CareCentric offers a fully integrated suite of products, services, support, education and financial alternatives to enable your business success.

About CareCentric:

Headquartered in Atlanta, and with more than 35 years of technology expertise and domain knowledge, CareCentric delivers technology, business operation and IT services to providers serving the entire home healthcare continuum.

Caretinum™ Point of Care is designed to provide agencies with a clear, concise system to document care in the home. Caretinuum promotes efficient, effective and consistent care delivery focused on achieving optimal Patient outcome and Agency performance. Access to and transmission of information from field to office is easily achieved from any Internet connection.

Improved Patient Outcomes

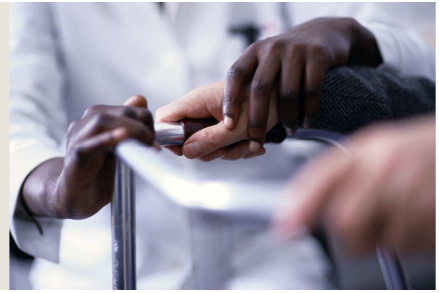

Customized visit documentation helps you efficiently meet the needs of your patient population. Through tightly integrated assessments and care plans, you can generate patient specific documentation while maintaining consistency of care across the agency. Guidelines and “helpful hints” assist in the coordination of care between clinicians. The Care Plan is dynamic and continues to build based upon changes in condition, visit to visit.

Enhanced Documentation of Care

Drawing from more than 30 years of home health domain and clinical system knowledge, Caretinuum understands that documentation extends beyond the visit in the home. The ability to document clinical team conferences as well as phone calls with the patient or physician, greatly aids in the coordination of care as well as the outcome for the patient. While promoting consistency of care across the agency, Caretinuum’s flexibility allows you to modify the assessment at the patient level and add care plan items as you are delivering care.

Customization

Caretinum gives agency administrators the ability to customize assessments by creating clinical questions defined by unique text, required field rules, skip logic, validation rules, and helpful hint text. This allows agency managers to insert their own standards of care into the POC program to help guide clinical practice and ensure optimal outcomes. Care plan elements are also completely customizable. Dynamic links between clinical documentation and the care plan can be established to build the plan of care based on the patient’s specific needs.

Assessment Validation

Multi-disciplinary, integrated OASIS and non-OASIS assessments are available for any visit, making it easy to record changes in patient-status. Through the use of Caretinuum's unique 'Smart Navigation' tool, the clinician has the ability to identify and correct OASIS errors at the point of care for immediate assessment validation. Changes can be easily assigned to the appropriate area of the assessment without leaving the current screen or impeding the caregiver's workflow.

Complete Capture of Visit Activity

To capture the total expense of patient care, it is important for clinicians to document all incurred costs. Caretinuum's activity log collects information for both visit and non-visit related activities, including supplies and travel expenses. Data can be easily uploaded to the office for fast, accurate input into billing and payroll. Clinicians can quickly document daily activities on the tablet as they complete them. This integrated data capture promotes accuracy, eliminates time-consuming data entry by office personnel and generates a complete record for cost and productivity reporting.
