

Point of Sale Integration

The Point of Sale (POS) solution combines quick cash sales with full-featured data entry for HME sales and rentals. POS enables full inventory control and bar-code integration, as well as walk-out invoices, insurance forms (both assigned and unassigned) and accounts receivable/sales analysis reports.

The Point of Sale solution allows easy-to-use retail cash register sales, without altering your current business practices through fully customizable parameters and settings.

About CareCentric:

Headquartered in Atlanta, and with more than 35 years of technology expertise and domain knowledge, CareCentric delivers technology, business operation and IT services to providers serving the entire home healthcare continuum.

Security

Before a transaction may be started at the POS, the cashier must log into the system. The system may be set up to automatically log the cashier out either after each transaction or after a specified idle time or to never log out.

Multi-Tasking

Occasionally, you may need to temporarily “save” a transaction in your register while you perform another transaction-related task. The Suspend Transaction feature allows you to save the transaction and return to it later.

Totals and Tenders

The total and tender process allows you to either select the tender of choice or simply swipe a card or feed a check into a MICR device. The application will automatically determine the card type and means of validation required to process the tender.

Product Searches

If you cannot scan or manually enter a product by its SKU or UPC code, you may search for that product in the database. Locating a product is as simple as using the SKU #, UPC #, Description, Dept, Class, Style, or Vendor.

Day-End Processing

Day-end processing is 100% customizable, performing tasks that include:

- Execution of external or third-party applications, including transaction log creation and settlement file creation
- Time-sensitive procedure processing
- File creation/deletion/copying/moving
- Log file backup procedures
- POS offline distribution file processing
- Electronic Journal file backup procedures
- Automatic event scheduling tasks
- Service suspend/resume capabilities
- Automatic report generation
- Automatic opening/closing registers
